

Installation detail:

Panic threshold

It is not necessary to remove the door from the hinges.

Step 1 . Remove the plate from the packaging and measure the door width, between jambs or door stops to determine the plate length required.

Step 2 . Measure the threshold and mark with a pencil the desired length (and profile if cutting around the door stop).

Step 3 . Pull back the vinyl bedding feet and silicone gasket and cut the threshold plate to length using a saw. Replace the vinyl feet and silicone gasket and trim to length with a knife.

Step 4 . Position the plate on the door sill in required location (ensuring the bottom edge of the door is butted up against the rubber bulb seal).

Step 5 Screw Fix:

Using a power drill with a 4.5mm drill bit, create fixing holes in the plate at the required positions. Countersink to ensure flush screw heads. With the plate in position, mark hole centres on the floor. Using a masonry drill, create fixing holes. Clean away dust and insert supplied plastic plugs. Screw fix.

Adhesive Fix:

Apply adhesive to the back of the threshold plate and place it in the desired position.
(Discard the vinyl feet if not suitable)

Step 6 . Where the threshold ramp meets the door stop, sealant may be applied to prevent ingress of moisture.

Step 7 Check to ensure the door can open and close without the need for excessive force.
